ARKIVIO™ auto-stor for UNIX Ships, First Solution to Integrate Storage with Intelligent Data Resource Management

MOUNTAIN VIEW, Calif., March 19, 2003 - Arkivio Inc.

announced today the general availability of the UNIX release of its ARKIVIO™ auto-stor software. With this release, Arkivio broadens their ability to provide customers with solutions to manage data growth and placement over its lifecycle, while driving the total cost of ownership to its lowest possible level.

The UNIX release of ARKIVIO™ auto-stor enables automated and agent-less discovery, monitoring, and reporting of data and storage resources across heterogeneous DAS/SAN/NAS environments. Administrators are able to monitor total capacity (available and used) and data usage patterns, so they can more accurately match future purchases with actual storage usage and the business value of their data. In addition, these UNIX enhancements build on ARKIVIO™ auto-stor's existing ability for Windows storage environments to adaptively optimize the placement of data on the most appropriate storage device on the network. By intelligently moving data to the appropriate resources, ARKIVIO™ auto-stor can fully utilize existing storage, actively prevent work stoppage due to volumes exceeding capacity, and automatically direct data to new storage resources.

"Our customers are especially concerned about the cost of managing storage," explains Giovanni Paliska, president and CEO of Arkivio. "ARKIVIO™ auto-stor raises the performance bar for

the Windows and UNIX communities by providing IT departments with early warning signals and an array of new preventative features to optimize storage usage and resolve potential problems before they disrupt the storage environment and end user productivity."

John Reece, vice president of sales for InterVision Systems, a leading infrastructure solutions and consulting company concurs with Paliska, "We are currently integrating ARKIVIO™ auto-stor into many of our large customers' IT sites to help them understand and optimize their storage environment." "Arkivio's agentless discovery allows us to unobtrusively determine for our customers how to optimize their backup windows, fully utilize existing capacity, and implement new hardware for tiered storage and online archiving. Seamlessly implementing and automating these cost reducing projects would not be possible without the use of Arkivio's software solution."

"InterVision continually demonstrates to their customers and the industry that they are a leader in providing storage management solutions," concludes Paliska. "They are using ARKIVIO™ auto-stor's unique ability to understand the customer's data and how the data's value changes over its lifecycle across Windows and UNIX servers. InterVision then utilizes ARKIVIO™ auto-stor to globally and actively manage their customers' storage environment and intelligently optimize the placement of data."

About Arkivio

Arkivio Inc., founded in December 2000, provides enterprise storage management automation software that minimizes administration and infrastructure costs while optimizing IT resources. The company's shipping solution, ARKIVIO™ auto-stor, redefines storage management for medium size businesses to large enterprises by enabling them to automate storage and data resource management, dynamically balance capacity utilization, track and utilize storage assets based on cost, and perform corrective actions in response to alerts - driving the cost per managed terabyte of storage to its lowest possible level, while providing significant ROI.

Contact Arkivio, Inc. at: Arkivio Inc., 2700 Garcia Avenue, Mountain View, CA 94043; Phone (650) 237-6100; Fax (650) 237-9183 or visit the company's website at: www.arkivio.com.

About Intervision

InterVision Systems Technologies Inc. is a leading infrastructure solutions and consulting company focusing on technology implementation for enterprise, service provider, technical computing and select e-business clients.

InterVision is helping companies with leading technologies in Computer Systems & Storage, High-Speed Networking, Data Availability, and Systems and Network Management. Our goal is to work with existing multi-vendor environments while providing the best solution for the future. We deploy technology solutions in these key areas with a top team of certified engineers and consultants.

Founded in 1993, InterVision understands the value in helping companies meet business objectives. Our long-term technical services and technology partnerships have given us the experience to get the job done. InterVision Systems works as a trusted advisor with our clients to provide rapid design and deployment of best-of-class solutions. This approach allows our clients to focus on their core competencies and InterVision to help create the desired results through technology management.

Contact InterVision Systems at 2250 Walsh Avenue, Santa Clara, CA 95050; Tel: (408) 980-8550; Fax: (408) 980-8893 or visit the company's website at www.intervision.com.
